

# Wireguard access

## How to access Calypso servers using Wireguard

The [staff](#) will provide you an access to the wireguard VPN, in the form of a configuration file named **\*wgXXX.conf\***.

Don't use the the same wireguard configuration on multiple computers at the same time!

Install wireguard as described [here](#).

## Linux

Put your personal configuration file **wgXXX.conf** that we provided you in your wireguard directory in **/etc/wireguard/**.

Then you can bring the interface up or down using the wg-quick

```
# Connect the VPN
sudo wg-quick up wgXXX

# Disconnect the VPN
sudo wg-quick down wgXXX
```

## Windows

Install the wireguard executable then import your personal configuration file **wgXXX.conf** that we provided you using the GUI.
